

November 4, 2022

Hello IS 201! It's Rainie from 731 and I'm here for our Friday SEAL summary on behalf of the S.E.A.L Team.

Leg warmers, acid-washed jeans, and other wild fashion choices were all products of the 1980s. However, did you know it was also known for a decade that saw significant technological developments as well.

A number of significant inventions in the 1980s not only improved living conditions but also changed the way the world operates today.

Although you might think that some of these things were developed sooner or much later, all of these classic technologies were developed in the 1980s. Inventions such as the artificial heart, DNA fingerprinting, the Nintendo game boy, the computer, the space shuttle, the Motorola, which was the first type of cell phone on the market. How cool is that?

Let's wrap things up with our SEAL Team pledge:

We are the Dyker S.E.A.L. Team

Positivity is our dream

We teach it every day

To help others live the optimistic way

We learn to control our emotions and feelings

So, we always have effective social dealings

No stone left unturned; no person left behind

Every member of our team has the power to be kind

We spread kindness to our friends, families, and those who need a smile
When facing hardships and adversity, the S.E.A.L. Team goes the extra mile

And as the Terminator would say “I be back” next week

Thanks for listening and have a Facts of Life Friday 😊
